Ingredients of DENTTABS-teethcaring tablets:

Microcrystalline Cellulose is the polishing agent that is responsible for the wonderfully smooth feeling due to which nothing can attach to the surface. No plaque – no toothdecay.

Sodium Bicarbonate is, combined with the citric acid, responsible for the correct pH-Level

Citric Acid see above & increases the flow of saliva through which the remineralisation works so much better.

Silica helps the cleaning/polishing and stabilize the tablet.

Sodium Lauroyl Glutamate is our Tensid (Soap). Ist duty is to tie the protein to the water so it will be flushed out when rinsing.

Although the name appears the word ‚Glutamate‘ it has nothing to do with what we hear about flavor-enhancer or anything alike!

DENTTABS free from glutamate and gluten.

Magnesium Stearate is a plantbased helper we need during pressing of the tablets.

Natural (Mint-) Aroma together with Stevia and Menthol is responsible for fresh and cool breath.

Menthol see above.

Stevia (Stevioside) see above.

Xanthan-Gum makes DENTTABS so smooth and creamy.

Sodium Fluoride - **'naturally' only valid for DENTTABS containing Fluoride!** – supports the remineralisation of your enamel. Especially sensitiv teethnecks may ‚repaired‘ within only days.

Eugenol is a natural part of the mintaroma.

DENTTABS are free from preserving agents, germicides, binding agents, aluminium, plastics!

Ingredients (INCI):

Microcrystalline Cellulose, Sodium Bicarbonate, Silica, Sodium Lauroyl Glutamate, Magnesium Stearate, Aroma, Menthol, Xanthan-Gum, Stevioside, Citric Acid, (**Sodium Fluoride**), Eugenol
